SUMMARY

BS Computer Science graduate who builds AI products end to end and keeps the guarantees in code, not in a prompt. Two live products, an offline assistant on 8 GB of RAM and a decision engine with 699 tests.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++

AI and ML: LLM integration (Gemini, Groq, Ollama), TensorFlow, scikit-learn, sentence-transformers, OCR, Monte Carlo simulation

Backend and data: FastAPI, Node.js, Laravel, PostgreSQL, MySQL, SQLite, SQLAlchemy, Docker

Frontend and deploy: React, Next.js, Tailwind CSS, Tauri, Capacitor (Android), Railway, Cloudflare, Vercel, Git

PROJECTS

Kairos: AI Decision-Intelligence Platform | Case study — in development

- Built a quantitative engine (MCDA, Monte Carlo, sensitivity analysis) so every number in a report is computed. The language model only explains the results.
- 699 tests, with the guard code mutation-tested. Backend adds idempotency, a circuit breaker and API cost tracking.

Mirror: Offline Android Game | Case study — nearly finished

- Wrote the opponent's learning engine by hand with no ML library. In simulation its error on a repeating player fell to 0.023, against 0.218 for the earlier model.
- Showed the first scoring design could be farmed, rebuilt it as a proper scoring rule, and tested it against 631 simulated strategies.

Spinzar Gems Co.: Gemstone Platform | Live site — client work, solo

- Built from database schema to live deployment, with integrity enforced in PostgreSQL itself (no-hard-delete triggers, optimistic locking). Includes an admin dashboard and multi-currency prices.

HireLens: AI CV Rating Platform | Live site — solo

- Hybrid OCR reads scanned CVs and embeddings match them to 115+ job roles. A deterministic weighted score sits over the model's ratings, so results stay consistent.

Also built: LEO, an offline assistant with Khowar memory. KhimiYaar AI, a health chatbot with an X-ray model at 96%+ accuracy. DineNest, a multi-tenant restaurant system (final year project, team of three).

EXPERIENCE

IT Intern, Aga Khan Health Services Pakistan, Chitral — July 2026 – present

- Support IT operations (troubleshooting, systems support, process fixes) and the rollout of a new Health Information System across units in Chitral.

Software Developer, SpecOne (independent) — June 2026 – present

- Design, build and deploy AI and full-stack products alone, from architecture to live deployment.

Course Facilitator, AI and Computing (volunteer), Aga Khan Education Board, Peshawar — May 2026

- Wrote all the material and taught Classes 6 to 12, from AI basics to practical prompt engineering.

EDUCATION

BS Computer Science, Institute of Management Sciences, Peshawar — 2022 – 2026

FSc Pre-Medical, The Langlands School and College, Chitral — 2019 – 2021

CERTIFICATIONS AND LANGUAGES

Google AI Essentials | AWS Cloud Practitioner Essentials | Supervised Machine Learning (DeepLearning.AI)

English (fluent), Urdu (fluent), Khowar (native), Pashto (beginner)
