PROFESSIONAL SUMMARY

Computer Science graduate focused on AI/ML and full-stack engineering. I build AI systems where the critical logic lives in code, not in a prompt: LLM applications, computer vision and retrieval pipelines that are deterministic where accuracy matters. I own projects end to end, from architecture and model integration to deployment, and have shipped publicly accessible products, not just prototypes.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C++, PHP, MATLAB

Backend & Data: FastAPI, Laravel, Node.js, PostgreSQL, MySQL, SQLite, SQLAlchemy, NumPy, Pandas, Scikit-learn, TensorFlow

Frontend: React, Next.js, Tailwind CSS, HTML, CSS

AI/ML: LLM Integration (Gemini, Groq, Ollama), Prompt Engineering, Computer Vision, Sentence-Transformers, Monte Carlo Simulation, OCR

Deployment: Vercel, Hugging Face Spaces, Railway, Cloudflare, Git/GitHub

EXPERIENCE

IT Intern

Aga Khan Health Services, Pakistan

Chitral, Pakistan

July 2026 – Present

- Support IT operations at a large healthcare service organization: systems support, troubleshooting, and process improvements across its IT infrastructure.
- Support the rollout of a new Health Information System (HIS) across healthcare units in the Chitral region.

Course Facilitator — AI & Computing (Volunteer)

Aga Khan Education Board, Peshawar

Peshawar, Pakistan

May 2026

- Designed and delivered AI and computing sessions for secondary school students (Class 6–12), covering core concepts, AI fundamentals, and practical prompt engineering.
- Developed all course materials, session plans, and supporting content independently.

PROJECTS

Kairos — AI Decision-Intelligence Platform (In Development)

Progress Verification [🔗](#)

Python • FastAPI • SQLite • Groq API

- Separates what a user knows from what they only assume, then runs the measurable side of a decision through a quantitative engine instead of asking an LLM to guess.
- Built the quantitative engine combining MCDA ranking, Monte Carlo simulation, sensitivity analysis, and PROMETHEE-based soft-constraint scoring; one reusable architecture, validated live on unrelated decisions (job offers, car purchases).
- Hardened the backend with request idempotency, a circuit breaker, and API cost/rate tracking, and shipped the full flow end to end: intake, guided domain builder, grounding review, and report generation.

Spinzar Gems Co. — Luxury Gemstone Showcase & Inquiry Platform

Live Site [🔗](#)

Next.js • FastAPI • PostgreSQL • SQLAlchemy • Railway • Cloudflare R2

- Designed and built, end to end, a production showcase-and-inquiry platform for a luxury gemstone dealer, from database schema to live deployment behind Cloudflare (DNS, SSL, R2 object storage).
- Enforced integrity in the PostgreSQL schema itself (no-hard-delete triggers, an inventory state machine, optimistic locking) and added typo-tolerant search and live multi-currency conversion.
- Built a role-based admin dashboard for inventory, inquiries, and staff, with photo/certificate uploads and GDPR-compliant customer-data anonymization.

LEO — Offline AI Assistant with Khowar Language Memory

GitHub

Tauri • React • FastAPI • SQLite • Ollama (Qwen2.5) • faster-whisper

- Built a privacy-preserving desktop assistant that runs fully offline on consumer hardware (8 GB RAM, no GPU), with zero recurring cost.
- Designed database-grounded memory for Khowar, a low-resource language missing from LLM training data, so the assistant only recalls vocabulary it was taught and never generates it, after finding and closing a confirmed fabrication failure.
- Engineered a deterministic-first request pipeline, short-term and permanent user-fact memory with relevance-aware recall, and offline speech-to-text with an accent-aware correction pass.

HireLens — AI-Powered CV Rating Platform

Live Site • GitHub

React • FastAPI • Google Gemini API • Sentence-Transformers • Tesseract

- Built and deployed (Vercel, Hugging Face Spaces) a full-stack app that rates CVs against Pakistani hiring norms: university tiering, CGPA conventions, and local recruitment patterns.
- Implemented a hybrid OCR pipeline (PyMuPDF, Tesseract, pdf2image) for PDF, PNG, and JPG uploads, including scanned and photographed documents.
- Matched CVs to 115+ job roles with sentence-transformer embeddings and a confidence-based fallback, and layered a deterministic weighted scoring algorithm over Gemini ratings for consistent, explainable results.

KhimiYaar AI — Health Information Chatbot

GitHub

FastAPI • React/Vite • Groq API • EfficientNetB0

- Built a full-stack health information assistant with interview and educational modes and a lab test analyzer that flags abnormal results inside the conversation.
- Fine-tuned an EfficientNetB0 fracture detection model on X-ray images to over 96% accuracy, and added emergency detection with region-specific Pakistan emergency contacts (including KPK/Chitral).

DineNest — Multi-Tenant Restaurant Management System (Final Year Project)

Team of three

Laravel 12 • MySQL • Tailwind CSS • Alpine.js

- Built one installation that runs many restaurants with strict data isolation: every protected route checks the active restaurant and every query is filtered by it.
- Delivered orders and payments, receipt printing, inventory alerts, suppliers, PDF/CSV reports, and role-based permissions with an activity audit log.

EDUCATION

Institute of Management Sciences (IMSciences), Peshawar

Bachelor of Science in Computer Science — CGPA: 3.15 / 4.0

Peshawar, Pakistan

September 2022 – July 2026

The Langlands School and College, Chitral

FSc Pre-Medical

Chitral, Pakistan

September 2019 – June 2021

CERTIFICATIONS

- Google AI Essentials Specialization — Google / Coursera (Verify) Jan 2026
- AWS Cloud Practitioner Essentials — AWS Skill Builder Jun 2026
- Supervised Machine Learning: Regression and Classification — DeepLearning.AI & Stanford Online / Coursera (Verify)
- Programming for Everybody (Getting Started with Python) — University of Michigan / Coursera (Verify)
- Introduction to Front-End Development — Meta / Coursera (Verify) Aug 2026
- Workplace Ethics and Professionalism — LearnKartS / Coursera (Verify) Aug 2026
- The Science of Well-Being — Yale University / Coursera (Verify) Aug 2026
